Notice of Fee Increase on October 1, 2004

If a reply to a "Notice of Allowance and Fee(s) Due" is filed in the Office on or after October 1, 2004, then the amount due will be higher than that set forth in the "Notice of Allowance and Fee(s) Due" because some fees will increase effective October 1, 2004. See Revision of Patent Fees for Fiscal Year 2005; Final Rule, 69 Fed. Reg. 52605 (May 10, 2004).

The current fee schedule is accessible from WEB site (<http://www.uspto.gov/main/howtofees.htm>).

If the fee paid is the amount shown on the "Notice of Allowance and Fee(s) Due" but not the correct amount in view of the fee increase, a "Notice of Pay Balance of Issue Fee" will be mailed to applicant. In order to avoid processing delays associated with mailing of a "Notice of Pay Balance of Issue Fee," if the response to the Notice of Allowance is to be filed on or after October 1, 2004 (or mailed with a certificate of mailing on or after October 1, 2004), the issue fee paid should be the fee that is required at the time the fee is paid. See Manual of Patent Examining Procedure (MPEP), Section 1306 (Eighth Edition, Rev. 2, May 2004). If the issue fee was previously paid, and the response to the "Notice of Allowance and Fee(s) Due" includes a request to apply a previously-paid issue fee to the issue fee now due, then the difference between the issue fee amount at the time the response is filed and the previously-paid issue fee should be paid. See MPEP Section 1308.01.

Effective October 1, 2004, 37 CFR 1.18 is amended by revising paragraphs (a) through (c) to read as set forth below

Section 1.18 Patent post allowance (including issue) fees.

- (a) Issue fee for issuing each original or reissue patent, except a design or plant patent:
- By a small entity (Sec. 1.27(a))..... \$685.00
 - By other than a small entity..... \$1,370.00
- (b) Issue fee for issuing a design patent:
- By a small entity (Sec. 1.27(a))..... \$245.00
 - By other than a small entity..... \$490.00
- (c) Issue fee for issuing a plant patent:
- By a small entity (Sec. 1.27(a))..... \$330.00
 - By other than a small entity..... \$660.00

Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at (703) 305-8283.

DETAILED ACTION

Amendment

1. Receipt is acknowledged of the amendment filed July 23, 2004.

Claim Objections

2. The numbering of claims is not in accordance with 37 CFR 1.126 which requires the original numbering of the claims to be preserved throughout the prosecution. When claims are canceled, the remaining claims must not be renumbered. When new claims are presented, they must be numbered consecutively beginning with the number next following the highest numbered claims previously presented (whether entered or not).

Misnumbered claims 87-94 have been renumbered 85-92.

Examiner's Amendment

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as 37 CFR 1 provided by.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Robert Goodell on October 14, 2004.

✓ Regarding claim 85, line 16, the words "the frequency" have been changed to ~~ta~~ frequency ~~to~~

✓ Regarding claim 85, line 33, the first instance of the words "the user" have been changed to ~~ta~~ user ~~to~~

Remarks

4. Currently claims 85-92 are pending in this application. The amendment filed July 23, 2004 cancelled claims 1-84. Previously, claim 36 was rejected under the judicially created doctrine obviousness type double patenting, however the rejection is moot in light of the claim's cancellation. Therefore claims 85-92 are allowable over prior art.

Allowable Subject Matter

5. Claims 85-92 are allowable over the prior art of record.

6. The following is an examiner's statement of reasons for allowance:

The best prior art of record teaches a system for reading code symbols, wherein the system includes a scanning mechanism, a processing mechanism, and a plurality of base units. The prior art of record however, fails to teach specific features of the system for reading code symbols, which is disclosed in the pending claims. The specific features of the system disclosed in the claims include a synthesizing mechanism for synthesizing a group of data packets, wherein each packet has a plurality of data fields containing codes for identifying the code symbol reading device, which is synthesizing the data packet in the group thereof. The data packet also includes a data packet number for identifying each data packet, a data packet group number for identifying the group to which each data packet belongs, and a sequence of digital data bits representative of the symbol character data. The code reading system further includes an RF signal generator for generating an electromagnetic signal having its frequency modulated by the digital data bits representative of the group of

Art Unit: 2876

data packets. The RF signal also transmits the modulated signal over a predetermined data transmission range in free space, wherein the frequency deviation of the signal produced by each of the code symbol reading devices is substantially the same and equal to a preselected frequency deviation value. Furthermore, although prior art teaches a plurality of base units, the specific features of the claimed base units are not taught. The base units include a receiver for receiving a modulated carrier signal transmitted from any one of the code symbol reading devices and a demodulator for demodulating any one of the received modulated carrier signals so as to recover at least one data packet therefrom. The base units also include a processing mechanism for analyzing the recovered data packet to determine whether the received data packet was synthesized by its assigned code symbol reading device, and if so, the symbol character data is recovered therefrom. Lastly, the base unit includes a buffer for buffering the symbol character data recovered from the data packet synthesized by the preassigned code symbol reading device, and a notification mechanism for automatically producing, in response to the recovery and buffering of the symbol character data, an acknowledgement signal perceptible to the user of the assigned code symbol reading device when the user is situated within the predetermined data transmission range. This is done to inform the user of the code symbol reading device that the symbol character data produced thereby has been received and recovered at the at the assigned base unit. All of the limitation discussed above cannot be found in prior art and moreover, one of

Art Unit: 2876

ordinary skill would not have been motivated to come to the above claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
